# NEW!

Low thermal insulation products for boilers!

## Expanded graphite gasket

This gasket, with a maximum working temperature of 650°C, replaces a double gasket usage. It is produced according to the standards of DIN 28091 and the management quality controls of standard ISO UNI EN9001/2008. The production process enables low tooling costs.

## EPDM pipes

EPDM pipes show excellent behaviour on condensing acid water. Another advantage are low tooling costs.

## PET felt thermal and acoustic insulation.

PET felt is often used in gas boiler and compressor applications. It has a good thermal and acoustic insulation. Produced conform Class 1FR.

## PE Foam Insulation cover

This customized "click in assembly" fits to reduce air leakage in condensing boilers. It has good thermal insulation value and conform to Class 1FR.

## Insulation cover

This low thermal customized insulation cover is available in various qualities - special foam with a woven cover for example.

For more detailed information about these products, please do not hesitate to contact one of our specialists.
